DATA SCIENCE FOR DEVELOPMENT

16 March 2020
The Alan Turing Institute

A one day workshop designed to bring together data scientists and development experts from both the academic and public/NGO sector to explore how advanced quantitative techniques might be deployed to tackle urgent development challenges.

Keynote by Stefan Dercon, Professor of Economic Policy at the Blavatnik School of Government and Economics Department (Oxford) and former Chief Economist at the Department of International Development (DFID).

Call for short talks/posters showcasing applications of data science for development or highlighting development challenges where data science might be deployed (deadline January 6): https://easychair.org/conferences/?conf=ds4dturing
