The International Conference on Computing, Communication and Power Technology aims to bring together leading academic scientists, researchers and research scholars to exchange and share their experiences and research results about all aspects of Engineering Technology and Innovation in the fields of computing, communication and power technologies. It also provides the premier interdisciplinary forum for scientists, engineers, and practitioners to present their latest research results, ideas, developments, and applications in all areas of Engineering Technology and Innovation. The diversified fields of computing communication and power engineering can have a unified solution in the perspective of an engineer who formulates it as a modelling, optimization, classification or clustering problem and finds the solution using conventional numerical or bio-inspired metaheuristic techniques. This conference creates a platform to exchange solution finding approaches across the fields of research.
