

International Workshop on Misinformation, Computational Fact-Checking and Credible Web

May 14, 2019, San Francisco, CA, USA

Co-located with The Web Conference

**THE WEB
CONFERENCE**

Topics

We aim to bring together researchers, practitioners, and educators in computer science, journalism, communication studies, law and public policy, psychology, and political science in order to explore four themes. Preference will be given to studies that take computational and/or data-driven approaches to the challenge.

- Computational algorithms, tools, systems, and applications for tackling misinformation and disinformation.
- Study of principles, methodologies, phenomena, and policy pertinent to misinformation and disinformation, in non-computing fields.
- Studies that address the ethical pitfalls in tackling misinformation and propose solutions to ensure fairness, transparency, and interpretability of tools or solutions to mitigate the challenges posed by malicious adversaries who misuse advanced computing and AI technologies.
- Misinformation-related education, including media literacy, data literacy, and logic and fallacy.
