

About the Conference

Rivers are multidimensional systems influenced by diverse stakeholders such as governments, communities, researchers, and industries. Sustainable and resilient river rejuvenation requires transparent communication, shared responsibilities, and long-term collaboration. The theme of the 4th International Conference on 'River Health: Assessment to Restoration' (RHAR 2025) is "Restoration of Small Rivers: Application of Advanced Tools and Technologies with Convergence of Policies and Programs", emphasizing the integration of science, technology, and governance to maximize impact. This convergence is vital for restoring small rivers, which are often overlooked but are essential to watershed health and ecological balance.

This event is organized by the Department of Civil Engineering, IIT (BHU) and Smart Laboratory on Clean Rivers (SLCR) Varanasi under the India-Denmark Green Strategic Partnership with National Mission for Clean Ganga (NMCG), and other key partners.
