

WiGRAPH presents:

Rising Stars in Computer Graphics Research

Our new Rising Stars in Computer Graphics is designed to encourage people of underrepresented genders to become research leaders in computer graphics. This is a two-year program tailored to researchers within two years of going on the job market. The program will pair each participant with a senior mentor and invite them to join two workshops co-located with SIGGRAPH 2022 and 2023. Travel assistance will be provided.

The Rising Stars Program is open to computer graphics PhD students and postdocs of underrepresented genders, including cisgender women, trans people of any gender, non-binary people, and all people with historically marginalized or underrepresented genders. Applicants should be expecting to obtain their PhD or complete their postdoc in 2024. Find more information and apply at <https://www.wigraph.org/events/2022-rising-stars/>
